1. Introduction

I. Introduction to project

This report includes a complete journey, phases, learning objectives, major goals, faced challenges and the applied knowledge and precautions done to get the best outcome in the design and development of an e-commerce website for a store selling diverse kinds of footwear products. It also includes the information of the tools used and their uses in the coursework along with the practical implementation. Since it is a group coursework, Bishrut Adhikari (Group leader), Pankaj Rai and Eijkeyal Pakhrin are the group members for this project. The project contains coding, report writing, designing, testing and many more tasks which are performed in a team with each other's suggestions, help and mentorship.

II. Important definitions and theories

a. HTML

The full form of HTML is Hyper Text Mark Up Language. It is used to develop and manage different pages on the web. It uses a variety of elements, tags, and attributes

to operate text, images, inks, and other media elements (Sanchaya Education Private limited, 2025).

Some important Html tags used in our web page div tag

In HTML, the <div> tag is a container element used to group and organize content. It stands for "division" and is often used to structure a web page by dividing it into sections. An example of div tag from our web page is given below:

```
111 <div class="comparison-grid">
112   <div class="comparison-box">
113     <h3>My Product Page</h3>
114     <img src="" alt="My Product page Page">
115     <p></p>
116   </div>
```

meta tag

The <meta> tag in HTML is used to provide metadata about a web page. Metadata is information about the HTML document that doesn't appear directly on the page, but is used by browsers, search engines, and other services. An example of meta tag used in our web page is shown below:

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <meta charset="UTF-8">
5     <meta name="viewport" content="width=device-width, initial-scale=1.0">
6     <meta charset="UTF-8">
7     <meta name="description" content="footwear commercials, shoes, sports, travel">
8     <meta name="keywords" content="shoes, men, women, sports, footwear">
9     <meta name="Walk" content="commercials, footwear">
10    <meta name="viewport" content="width=device-width, initial-scale=1.0">
11    <title>Products</title>
```

table tag

The <table> tag in HTML is used to create a table for displaying data in rows and columns. An example of table tag used in our web page is shown below:

```

<table>
  <tr>
    <th>Brand</th>
    <th>Strengths</th>
    <th>Weaknesses</th>
  </tr>
  <tr>
    <td>Nike</td>
    <td>Strong Brand, Great UX</td>
    <td>Expensive & Limited casual shoes</td>
  </tr>
  <tr>
    <td>Asos</td>
    <td>Trendy Selection</td>
    <td>Slow mobile performance</td>
  </tr>
  <tr>
    <td>Zappos</td>
    <td>Advanced filters, customer support</td>
    <td>Outdated design</td>
  </tr>
</table>

```

image tag

The tag is used to display images in a webpage. An example of image tag used in our web page is shown below:

```

<h3>My Blog Page</h3>

```

form tag

The <form> tag is used to create an HTML form for collecting user input like text, passwords, emails, selections, etc. An example of form tag used in our web page is shown below:

```

<h2>Contact Me</h2>
<form id="contactForm">
  <label for="name">Name:</label>
  <input type="text" id="name" required>

  <label for="email">Email:</label>
  <input type="email" id="email" required>

  <label for="message">Message:</label>
  <textarea id="message" rows="4" required></textarea>

  <button type="submit">Send</button>
</form>

```

Comment tag

In HTML, a comment tag is used to add notes or explanations within your code that are not displayed in the browser. These comments help developers understand the structure or purpose of code but are ignored during rendering. An example of comment tag is shown below:

```

<!--css starts from here-->
<style>
body{
font-family: Arial, sans-serif;
background-color: #f8f8f8;
margin: 0;
padding:0;
}

```

b. CSS

CSS stands for Cascading Style Sheet. It is used to decorate and design the layout of the webpage. It allows us to customize color, font, size, spacing, alignment, background, screen sizes and many more (W3 schools, 2025).

i. Inline CSS

Inline CSS is the type of CSS used when we have some contents that must be different from the other elements on the web page. It helps the user to manage Html elements one by one (Kumar, 2024). An example of inline CSS used in our web page is shown:

```

<section>
<!--inline CSS-->
<h2 style="text-align: center;">
  <a href="/comparasion.html">Direct Comparasion with Other similar websites</a>
</h2>
</section>

```

ii. Internal CSS

Internal CSS helps to use the styles to a single document without affecting the other pages. It is specially written on the <head> section of the web page with the help of <style> tag (Kumar, 2024). An example of internal CSS used in our web page is shown:

```

<style>
  body{
    font-family: Arial, sans-serif;
    background-color: #afa8f8;
    margin: 0;
    padding: 0;
  }
  header{
    background-color: #e111;
    color: white;
    padding: 1rem;
    text-align: center;
  }
  nav{
    margin-top: 0.5rem;
  }
  nav a{
    color: white;
    text-decoration: none;
    margin: 0 1rem;
    font-weight: bold;
  }
  nav a:hover{
    text-decoration: underline;
  }
  main{
    padding: 2rem;
  }
  h2{
    color: #333;
  }
  .comparison-section{
    margin-bottom: 3rem;
  }
  .comparison-grid{
    display: flex;
    flex-wrap: wrap;
    gap: 2rem;
    justify-content: center;
  }
  .comparison-box {
    font-family: Arial, Helvetica, sans-serif;
    text-align: justify;
    width: 650px;
    background: white;
    border: 1px solid #ccc;
    padding: 1rem;
    box-shadow: 2px 2px 8px rgba(0, 0, 0, 0.1);
  }
  .comparison-box img{
    width: 100%;
    height: 650px;
    border: 1px solid #ddd;
  }
  .link{
    margin-top: 0.5rem;
    display: block;
    text-align: center;
  }
  .link a{
    color: #0066cc;
    text-decoration: none;
  }
  .link a:hover{
    text-decoration: underline;
  }
  footer{
    background-color: #ddd;
    text-align: center;
    padding: 1rem;
  }
</style>

```

iii. External CSS

The name itself describes its uses. In this type of CSS, an external “CSS” file is used to store overall styling for all Html elements. Thus, stored files can be reused to different web pages by linking the “CSS” file with the web page (Kumar, 2024). An example of external CSS used in our web page is shown below:

```

1 body{
2   font-family: Arial, sans-serif;
3   margin: 0;
4   background: #a71856;
5   color: #333;
6   line-height: 1.6;
7 }
8
9 header{
10  background: #9b8fab11;
11  color: #fff;
12  padding: 1rem 2rem;
13  display: flex;
14  justify-content: space-between;
15  align-items: center;
16  flex-wrap: wrap;
17 }
18
19 nav a {
20  color: #1bc367;
21  margin-left: 20px;
22  text-decoration: none;
23  font-weight: bold;
24 }
25
26 main{
27  padding: 2rem;
28  background: #fff;
29 }
30
31 h1, h2{
32  color: #2c3e50;
33 }
34
35 section{
36  margin-bottom: 2rem;
37 }
38
39 table{
40  width: 100%;
41  border-collapse: collapse;
42  margin-top: 1rem;
43 }
44
45 th, td {
46  border: 1px solid #7b797e;
47  padding: 0.75rem;
48  text-align: left;
49 }
50
51 th{
52  background-color: #73be60;
53 }
54
55 footer{
56  text-align: center;
57  padding: 1rem;
58  background: #af5d73;
59 }

```

c.

JavaScript

JavaScript is the language that brings websites to life. While HTML is used to structure a page and CSS styles it, JavaScript makes everything interactive like buttons that respond when you click them, forms that check your input, or content that updates without reloading the page. It's one of the core tools in web development and runs directly in your browser. For example, with just one line of JavaScript, you can change the text on a webpage instantly (W3schools, 2025). An example of JavaScript used in our web page is shown below:

Internal JavaScript

```

<script>//internal js ko lagi
document.querySelector("form").addEventListener("submit", function (e) { //when a form is submitted it rund the function e (e is event function)
e.preventDefault(); // page reload hudaina

// star rating select
const rating = document.querySelector('input[name="rating"]:checked');
const stars = rating ? rating.value : "No rating";

// review selecty
const comment = document.querySelector('textarea[name="comment"]').value;

// display the review and star
const reviewBox = document.createElement("div");
reviewBox.style.marginTop = "20px";
reviewBox.style.padding = "10px";
reviewBox.style.border = "1px solid #ccc";
reviewBox.style.backgroundColor = "#f9f9f9";

reviewBox.innerHTML = `<strong>Rating:</strong> ${stars} star(s)<br><strong>Review:</strong> ${comment}`; //review ko content lai box bhitra halcha

document.querySelector(".review-section").appendChild(reviewBox); //adds a auto div box when a review is generated

// Reset form
this.reset();
});
</script>

```

External JavaScript

```

1 // Wait for the form to be submitted
2 document.getElementById("contactForm").addEventListener("submit", function(e) {
3     e.preventDefault(); // Prevents the page from reloading
4
5     // Show a confirmation message after clicking Send
6     document.getElementById("confirmation").innerText = "Thank you! Your message has been received.";
7
8     // Clear all form fields after submission
9     this.reset();
10 });

```

III. Aims

The major aims of this project are listed below:

- To develop an e-commerce website platform for the selling and distribution of footwear items.

- To interact with the real-world situations in website development and design.

- To learn to tackle real-life problems and scenarios during the development phases.

- To develop teamwork and time management skills.

- To develop research skills from different pre-works and valid resources.

- To achieve mastery in coding, report writing, documentations and presentations.

- To be familiar with the tools and resources used to develop and design the website.

IV. Objectives

The objectives of the given coursework are mentioned below:

Develop a website that can pass distinct phases of testing and can smoothly run on the browsers.

To work on the problems and difficulties that arise during the process.

To work on a team for each phase of development and help each other complete the work within the time limit.

Utilize all the coding learned during college hours and explore new codes and syntaxes as per the necessity of the work.

To use tools like vs code, chrome browser, balsamiq and languages like HTML, CSS, and JavaScript to complete the coursework.

Maintain the report and document the work for the proper explanation and presentation.

V. Tools used

a) Visual Studio Code and Sublime text

- To write and edit the website code (HTML, CSS, and JavaScript).

b) GitHub

- To track and manage changes made to the code over time.

c) Chrome, Edge

- To test and view how the website looks and behaves.

d) Figma and Balsamiq

- To create wireframes, mockups, and prototypes before actual coding.

e) MS-word and MS PowerPoint

- To author a report and to present the project.

VI. Verdict

Concisely, a complete process is followed and performed for the development of an e-commerce website which involves research, coding, report writing, documentation and many more. Goals are set and things are done to achieve the major objectives of the coursework. Different development tools, platforms and resources are used to learn

the developmental phase and are well implemented in unique and creative manners. Moreover, the materials and teachings during the lecture, tutorial and workshop have really helped to solve the problems in an efficient way.

2. Wireframes and their web pages

The wireframes are the prototype of the webpages and they are made using the tool “Balsamiq”. Balsamiq is the software which helps users to build the blueprints and prototypes of many kinds of digital and physical projects. It has variety of tools and elements to represent the duplicate of real objects used in the projects. It is easy to use and really helpful for any kinds of developers. All the wireframes and the resulting web pages are presented below side by side.

Home page wireframe and web page

Homepage

The homepage of our website includes the overall introduction of the website where a user can find the navigations to go to the other pages also. It includes some images and information about our motive and products. We have used Html and CSS to develop the homepage.

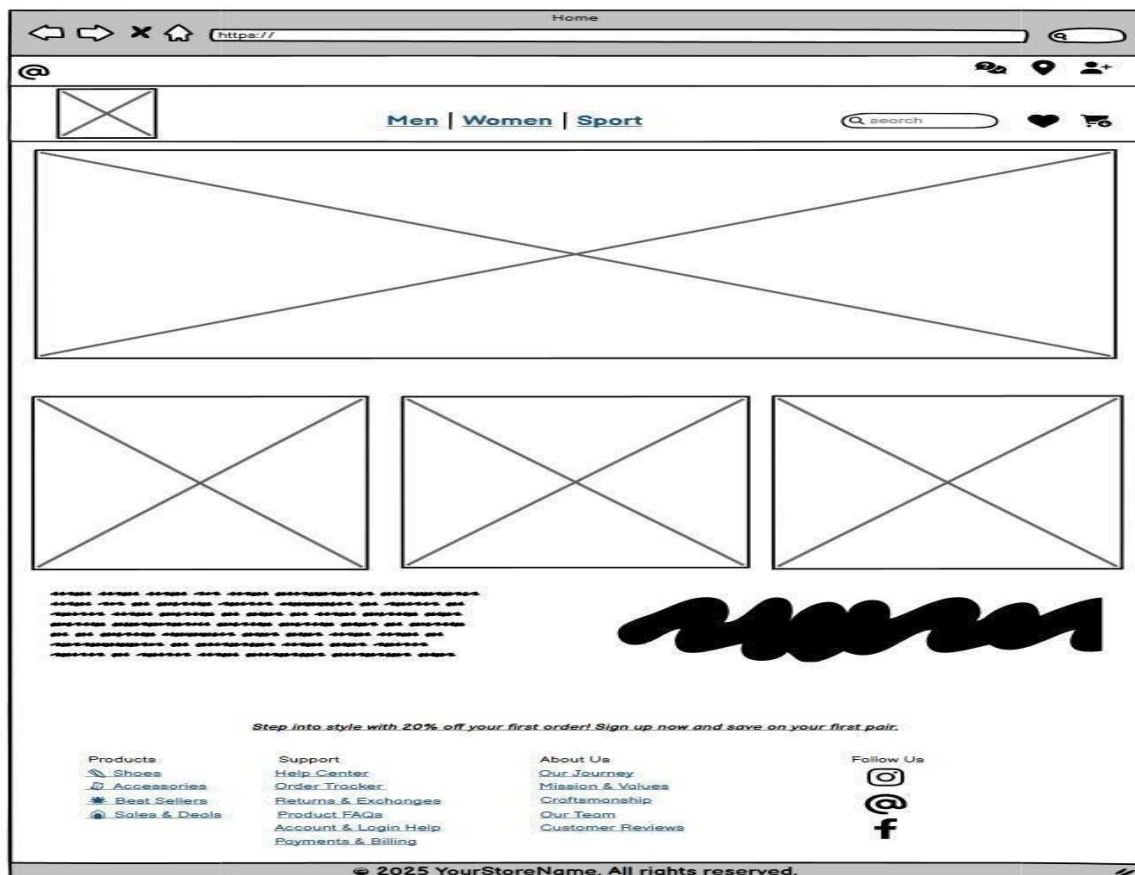

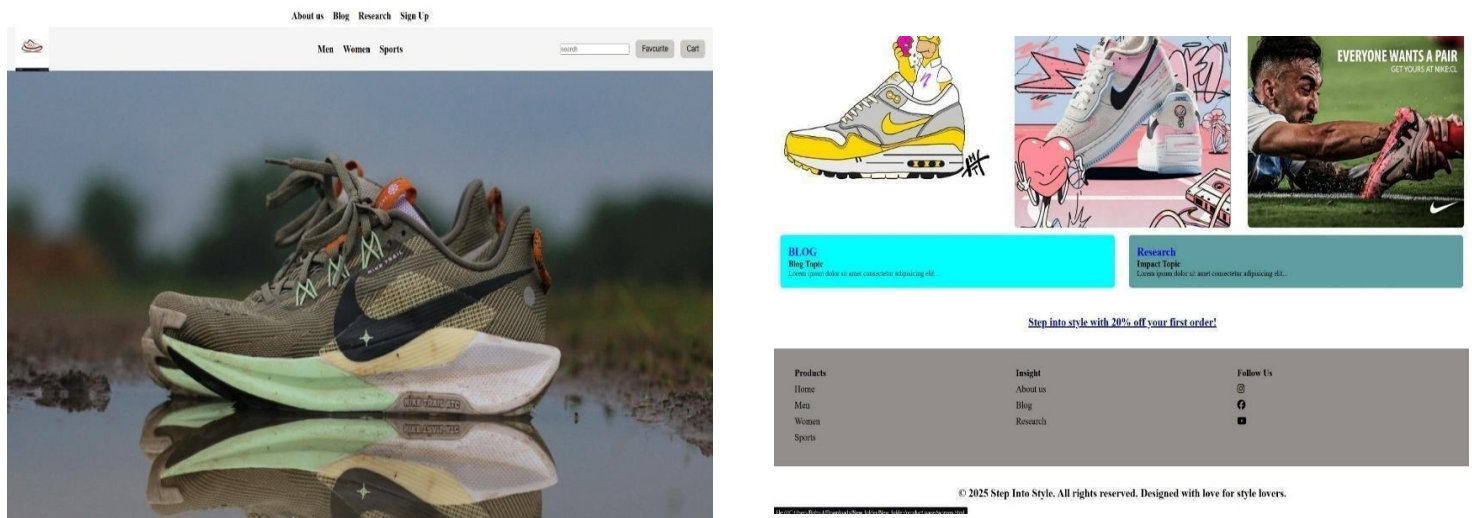

Figure 1 Homepage wireframe

Product page wireframe and webpage

Product page

Our product page includes the collections of different kinds of footwear items on different categories of men and women. The users can check out the different images

of the products to see the features of the products. Not only that they can also see the ratings given to the products given by the previous customers. The products have their prices right below them and the purchase are just one click away from the customers.

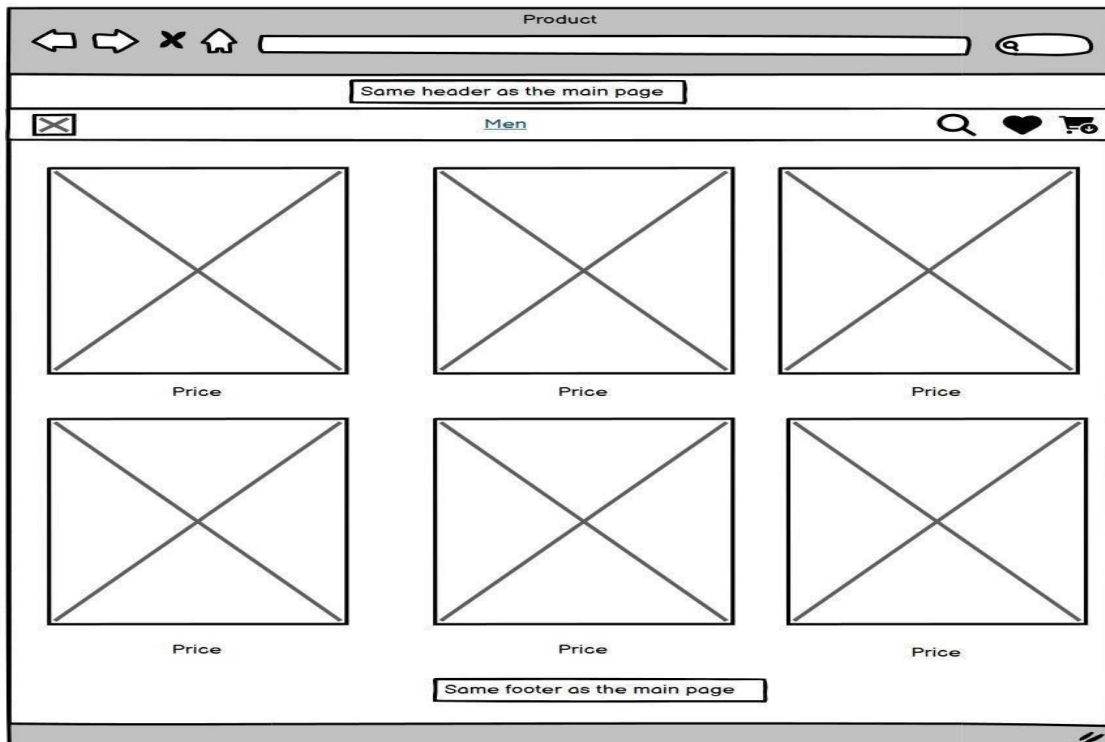

Figure 3: Product Wireframe

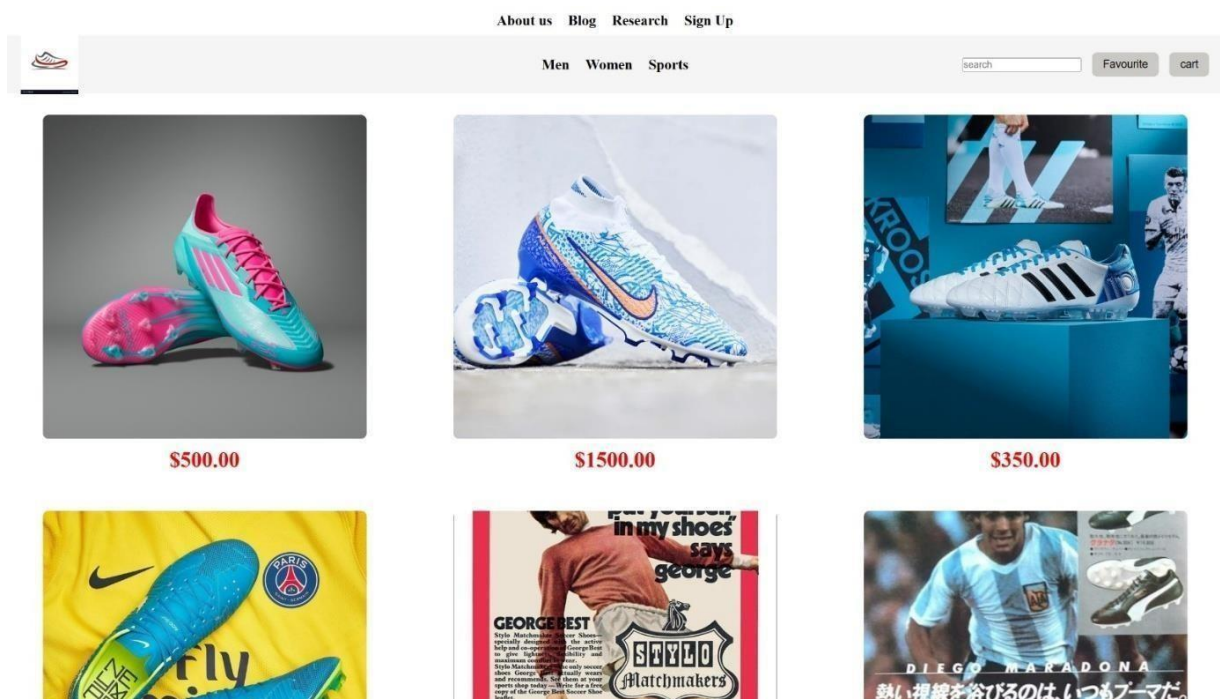

Figure 4: Product web page

Inside product wireframe and web page

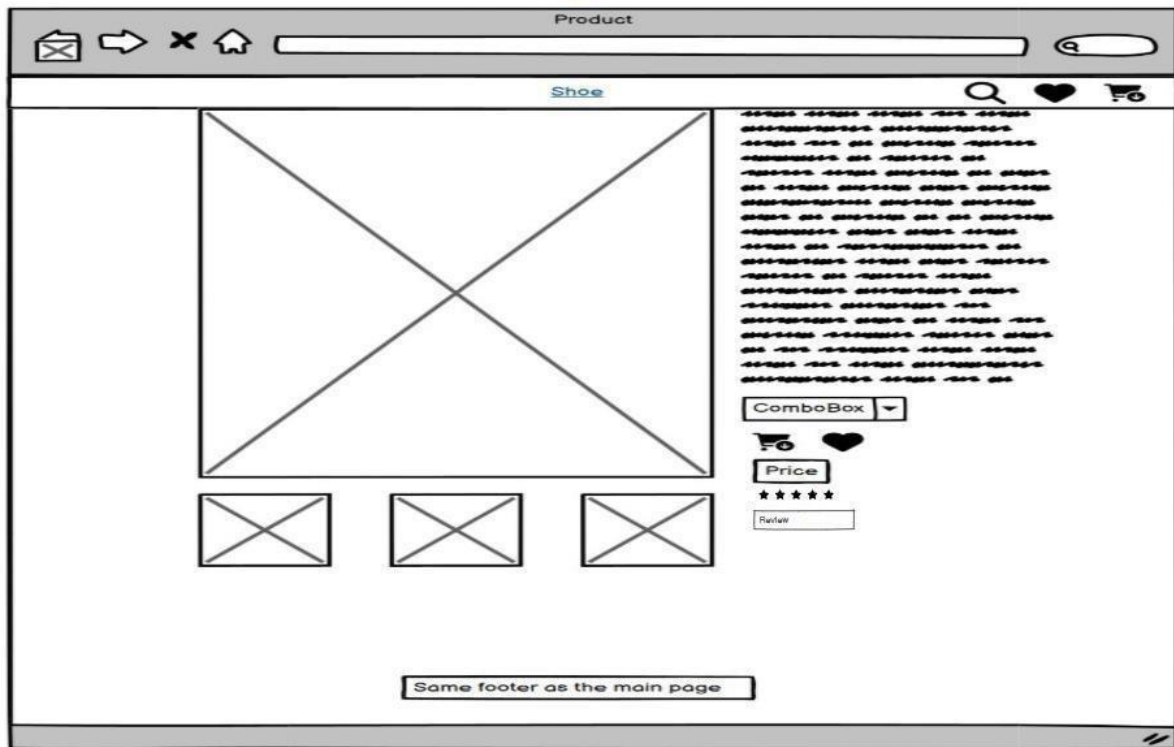

Figure 2: Inside product wireframe

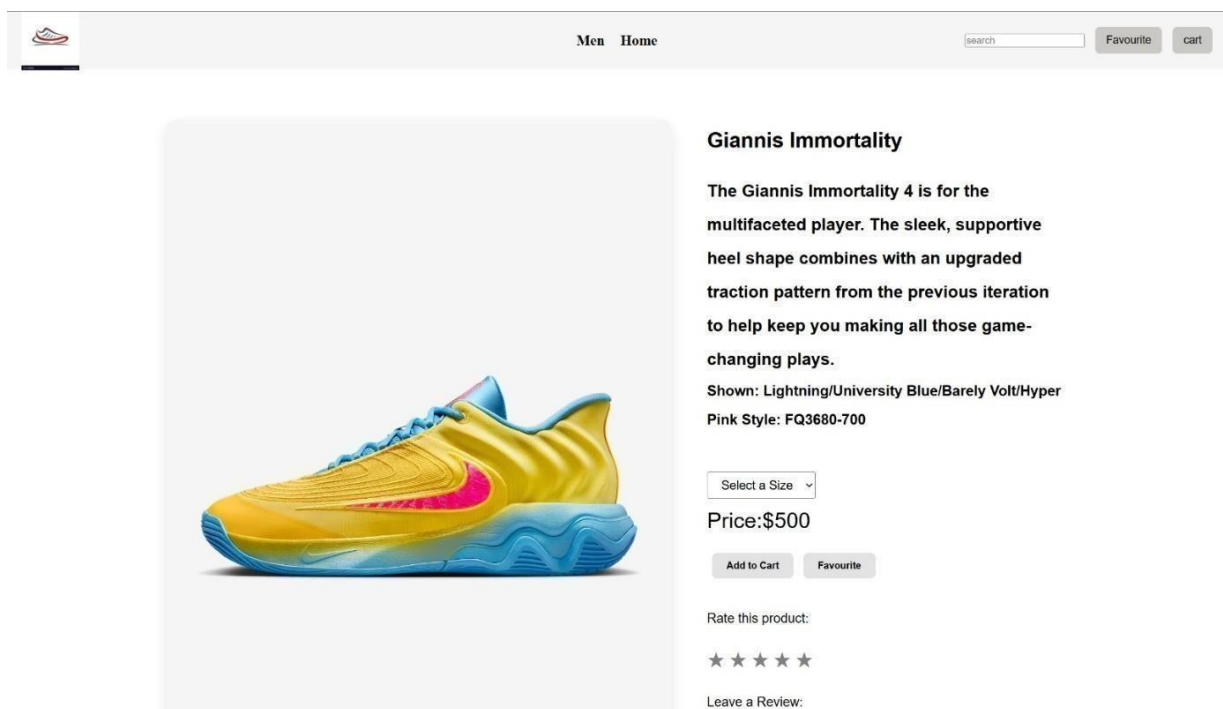

Figure 3: Inside Product web page

Blog wireframe and web page

Blog page

The blog page of our website mainly focuses on the customers who are interested in learning more information about our company and the websites. This page contains stories, articles, news and the journey related to our company. Such stories and articles are briefly mentioned to give the summary of that specific content.

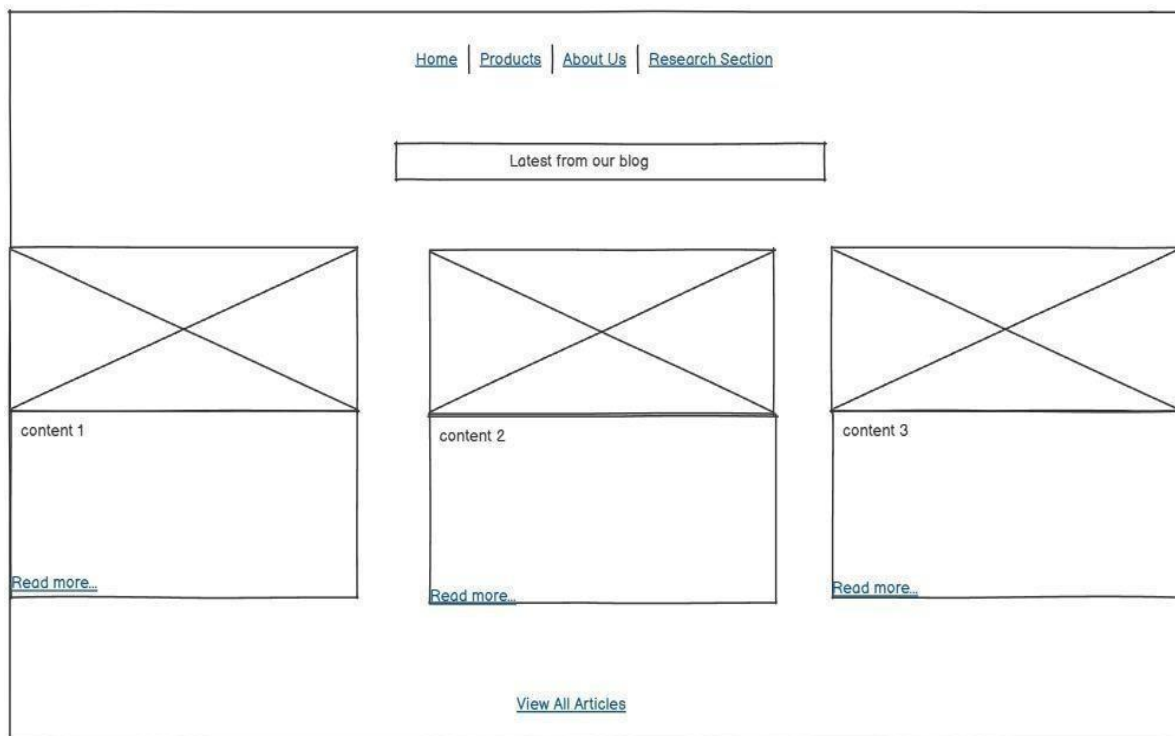

Figure 4: Blog wireframe

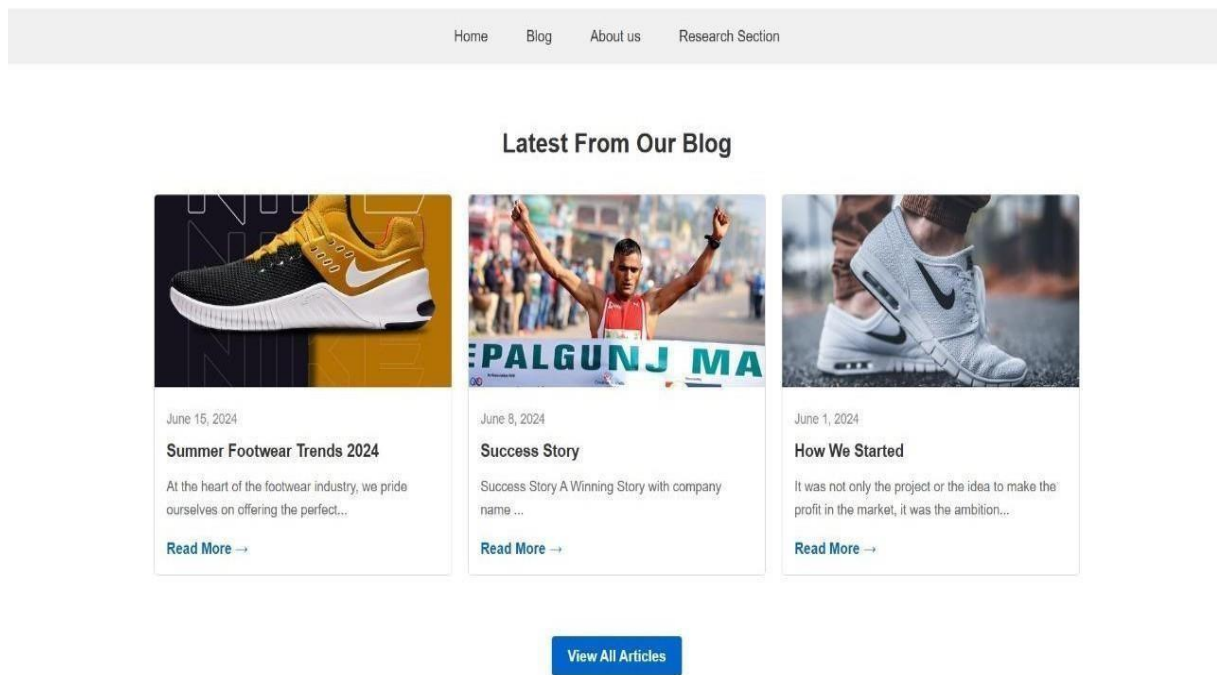

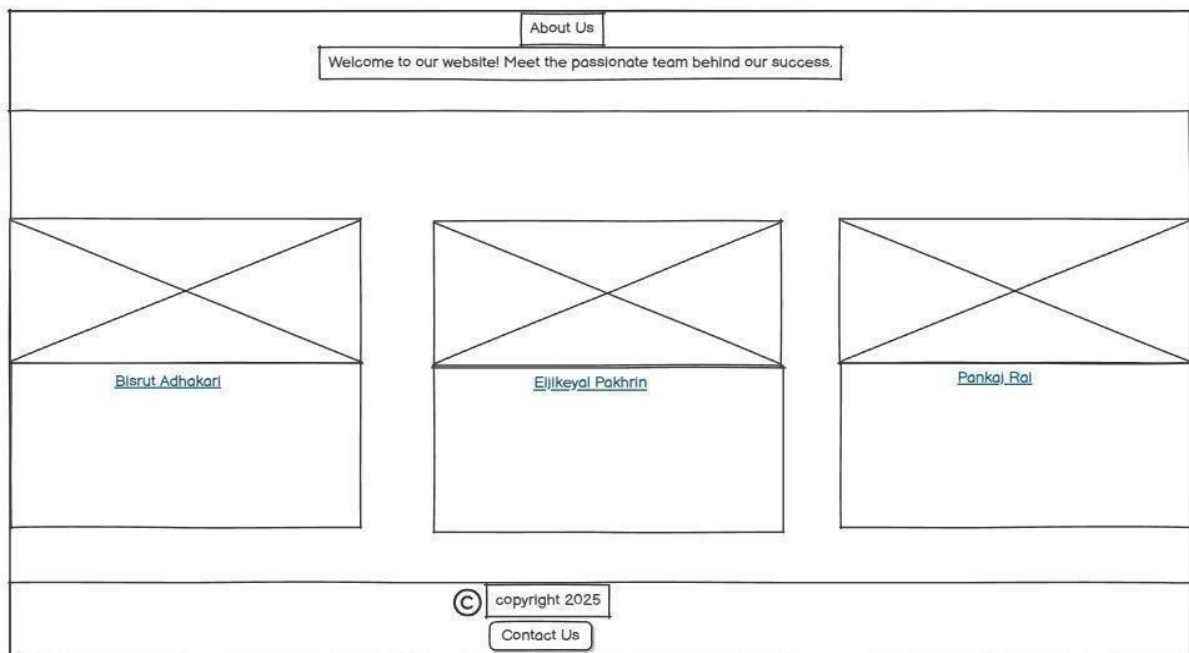

Figure 5: Blog web page

About Us wireframe and web page

About us page

This page is all about the company, website and owners of the company. Here we can find the contact information of the company, owners and their roles in the company. We can also find the individual information of the owners like qualification, contacts, email address and so on.

Us

wireframe

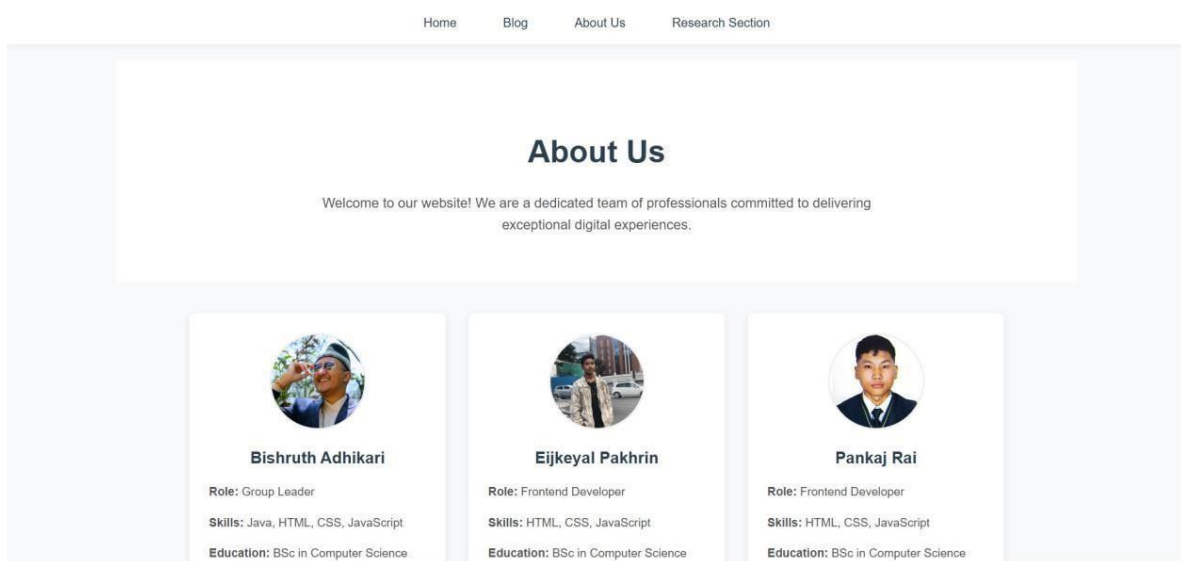

Figure 7: About Us web page

Research Section wireframe and web page

Research section page

In this page we discussed about the development of the website. We have mentioned our inspirations and the reference websites and companies in this page. This will be helpful for the other developers and customers to get the idea to start the new company along with the new website.

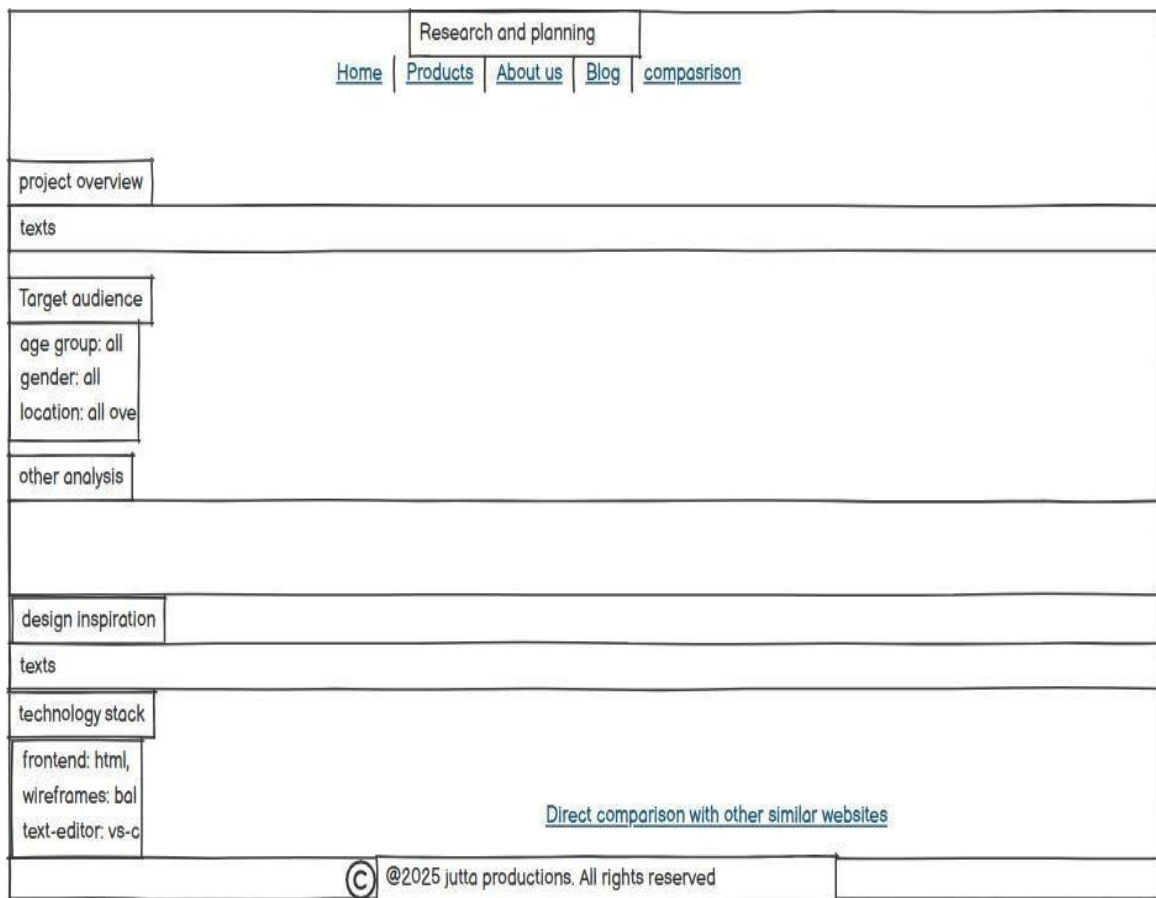

Figure 8: Research Section wireframe

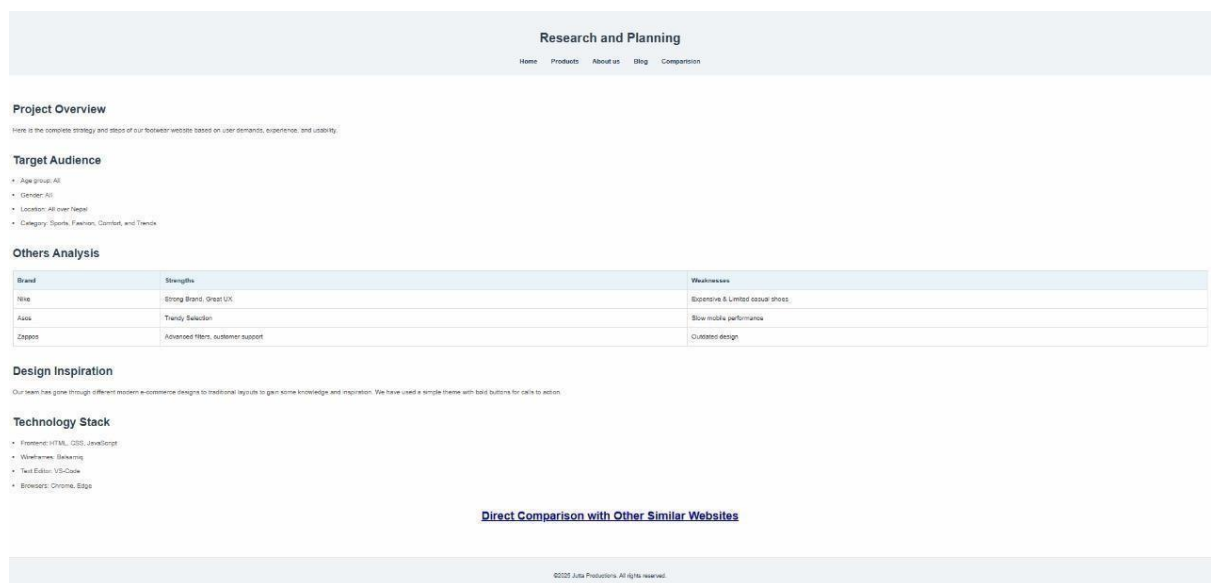

Figure 9: Research Section web page

3. Development

The development process that we did is well mentioned below along with the transitions, changes tests and problems we faced. The problems faced during the development phases were mostly in the CSS sector as it was the first time the team had used CSS the screenshots for the progress have been provided.

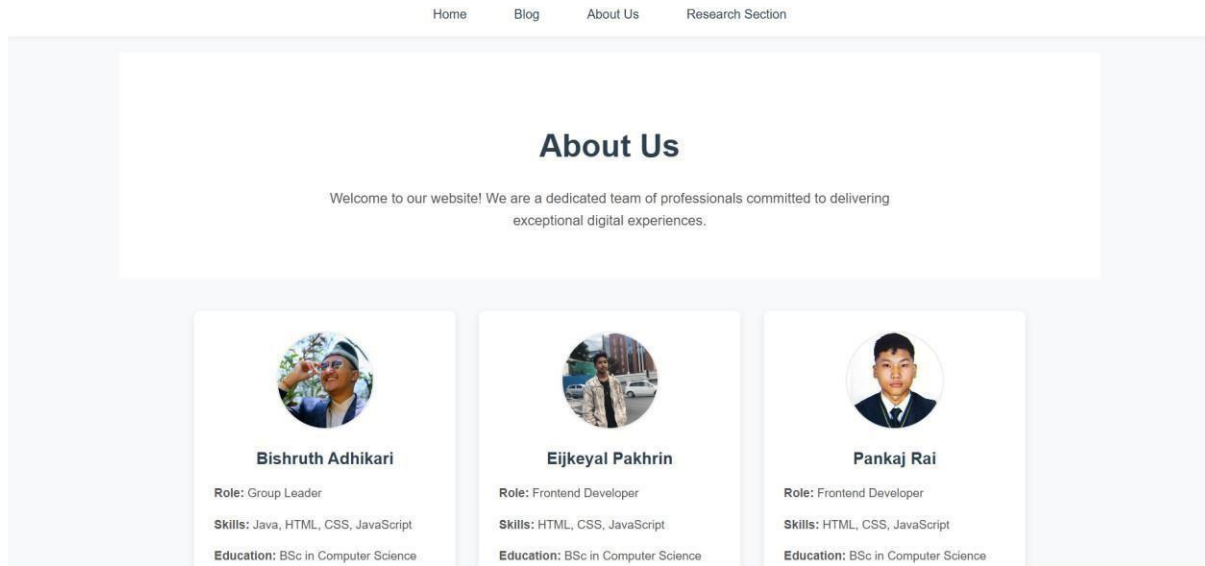

Figure 19: After About Us

4. Testing

After the completion of the development of the website, we have performed testing to test check the functionality of the codes that we have used in our website. After performing the test, we have also presented the test result alongside. We have divided the testing phases in different categories and they are as follows:

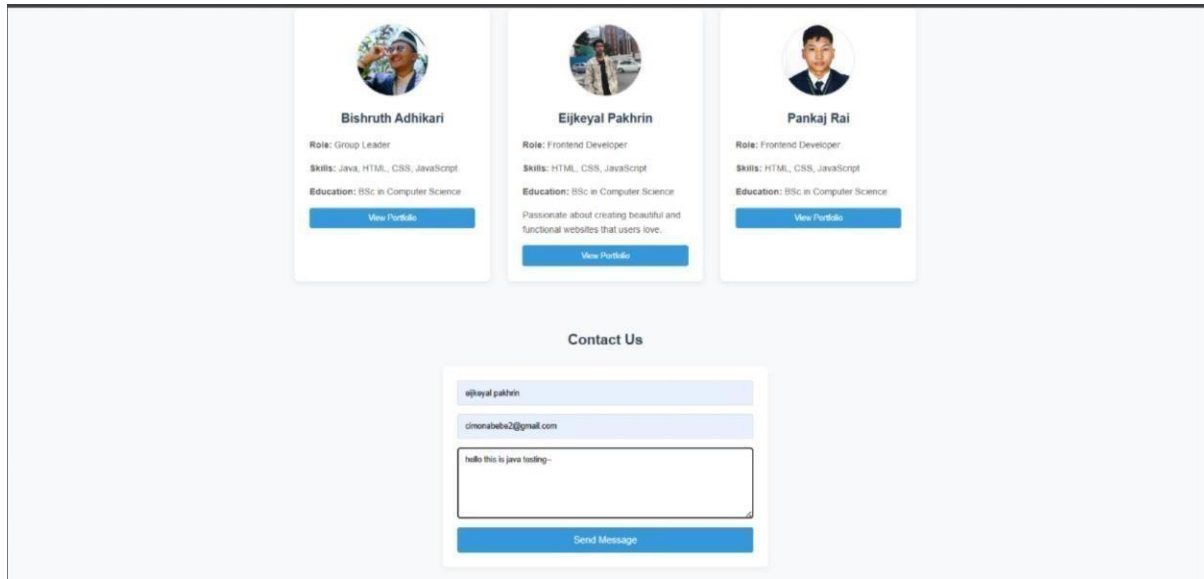

i. Testing the form validation:

Objective	To test whether the submission form gives the message or not.
Action	Go to about us Fill the form Click on send button
Expected result	Whenever user submit the form after filling all the information, the "Form submitted successfully! Thank you, Name" message should appear just below the form.

Actual result	When the user submits the form, message appeared as “Form submitted successfully! Thank you, Name”
----------------------	--

Test status	The test was successful.
--------------------	--

Before:

The screenshot displays a web application interface. At the top, there are three team member profiles, each with a circular profile picture, name, role, skills, education, and a 'View Portfolio' button. Below these profiles is a 'Contact Us' section containing a form with three input fields: a name field (pre-filled with 'vijayal pakhrin'), an email field (pre-filled with 'cimonabeta2@gmail.com'), and a message field (pre-filled with 'hello this is java testing-'). A 'Send Message' button is located at the bottom of the form.

Bishruth Adhikari

Role: Group Leader

Skills: Java, HTML, CSS, JavaScript

Education: BSc in Computer Science

[View Portfolio](#)

Eijkeyal Pakhrin

Role: Frontend Developer

[Send Message](#)

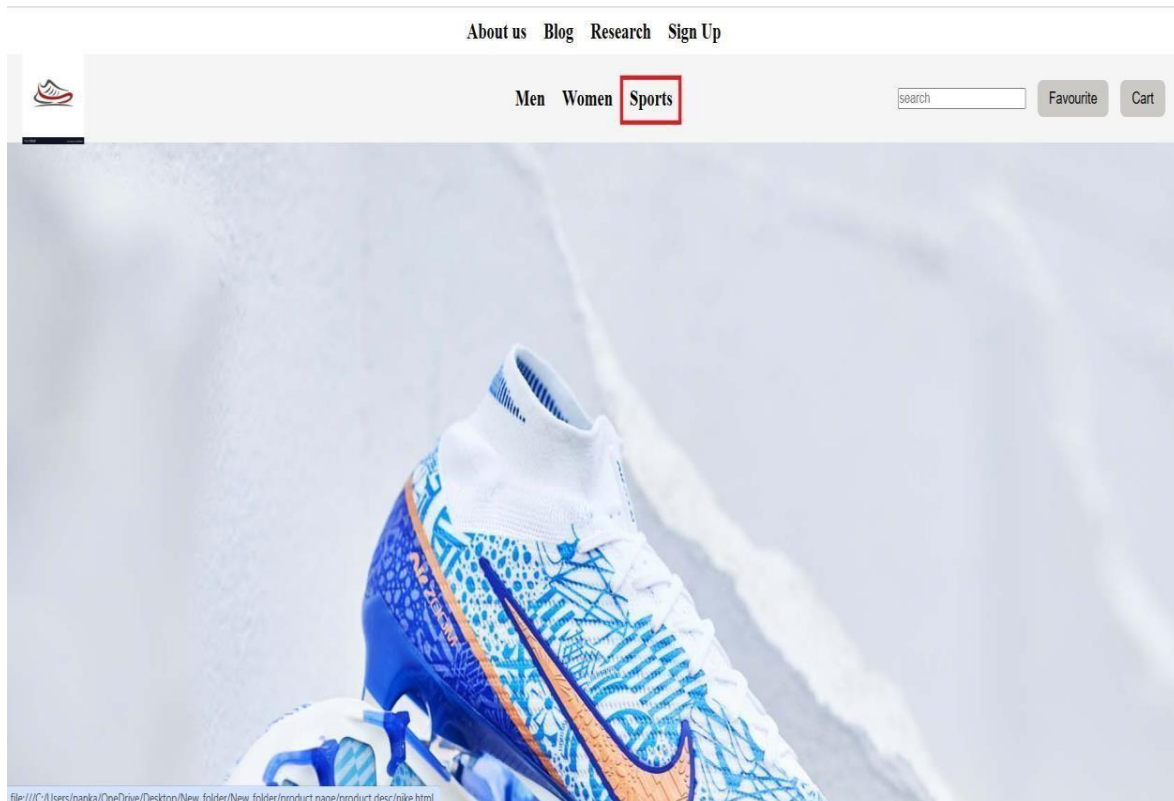

After:

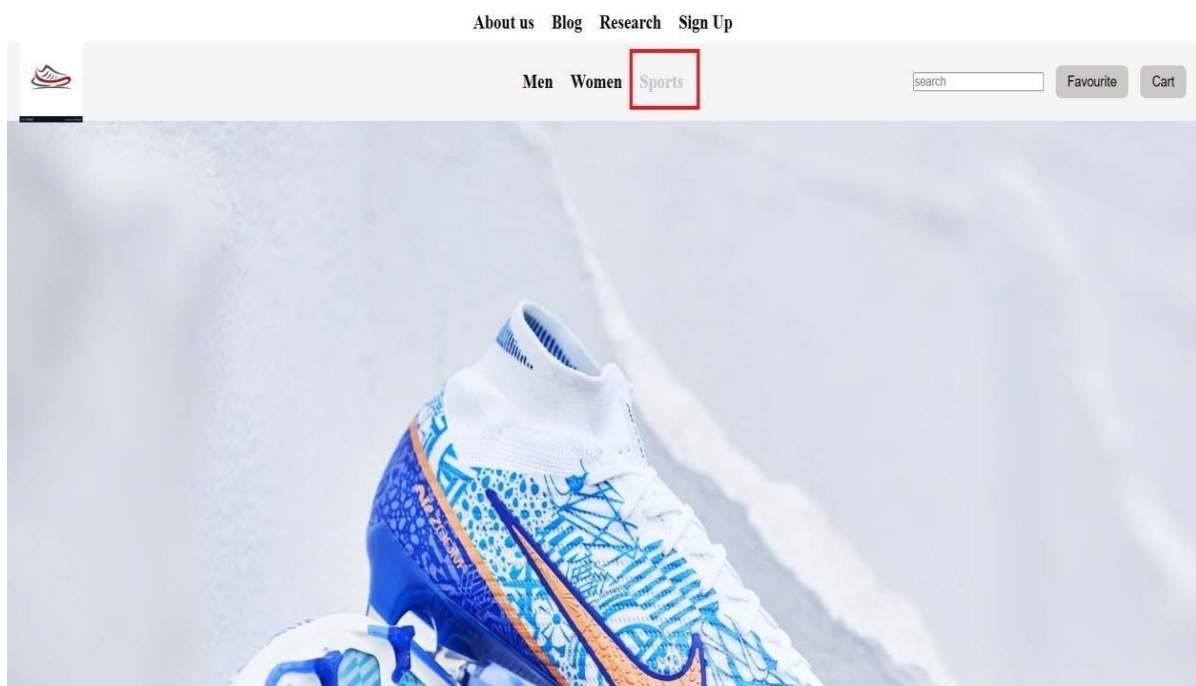

ii. Testing the hover effect:

Objective	To test whether the buttons on the navigation shows the hover effect or not
Action	- Go to homepage - Move the cursor to any of the buttons on the nav bar - Point the mouse on it
Expected result	On pointing the mouse on the button, the hover effect will be shown.
Actual result	on pointing the cursor to the sports button, it appeared fader.
Test status	The test was successful

Before:

After:

iii. Testing the links in the research page

Objective	To check whether the links worked or not in the website
Action	- Go to research section - Scroll down and click on “Direct comparison with other similar websites” - Scroll down and click on “visit Shoegazing website”
Expected result	- When the user clicks on “Direct comparison with other similar websites”, the comparison page should appear - When the user clicks on the “visit Shoegazing website”, the website of the Goldstar company should appear
Actual result	The comparison web page and the website of Shoegazing appeared
Test status	The test was successful

Before:

Others Analysis

Brand	Strengths	Weaknesses
Nike	Strong Brand, Great UX	Expensive & Limited casual shoes
Asos	Trendy Selection	Slow mobile performance
Zappos	Advanced filters, customer support	Outdated design

Design Inspiration

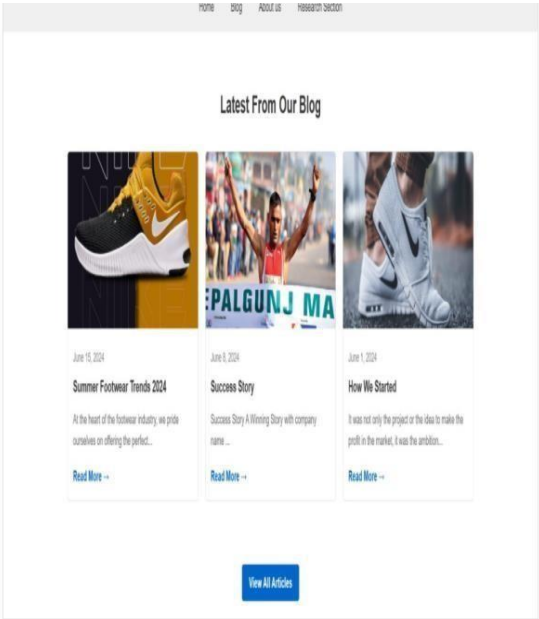

Our team has gone through different modern e-commerce designs to traditional layouts to get some knowledge and inspiration. We have used simple theme with bold buttons for calls to action.

Technology Stack

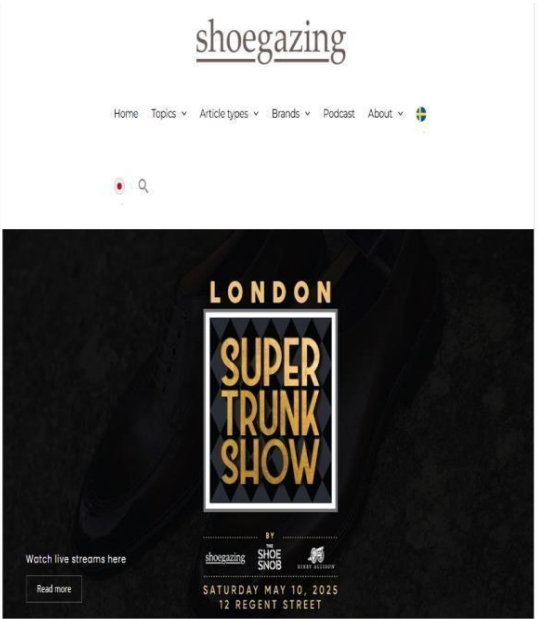

- Frontend: Html, CSS, JavaScript
- Wireframes: Balsamiq
- Text Editor: VS-Code
- Browsers: Chrome, Edge

[Direct Comparasion with Other similar websites](#)

After:

Our blog page consists of different articles briefly covered in the main blog page and can be learned in detail by clicking on the read more button of the specific blogs.

The blog page of Shoe gazing has varieties of articles and blog options which includes topics of articles and its types. Similarly the blog contains different news and notices in the name

After:

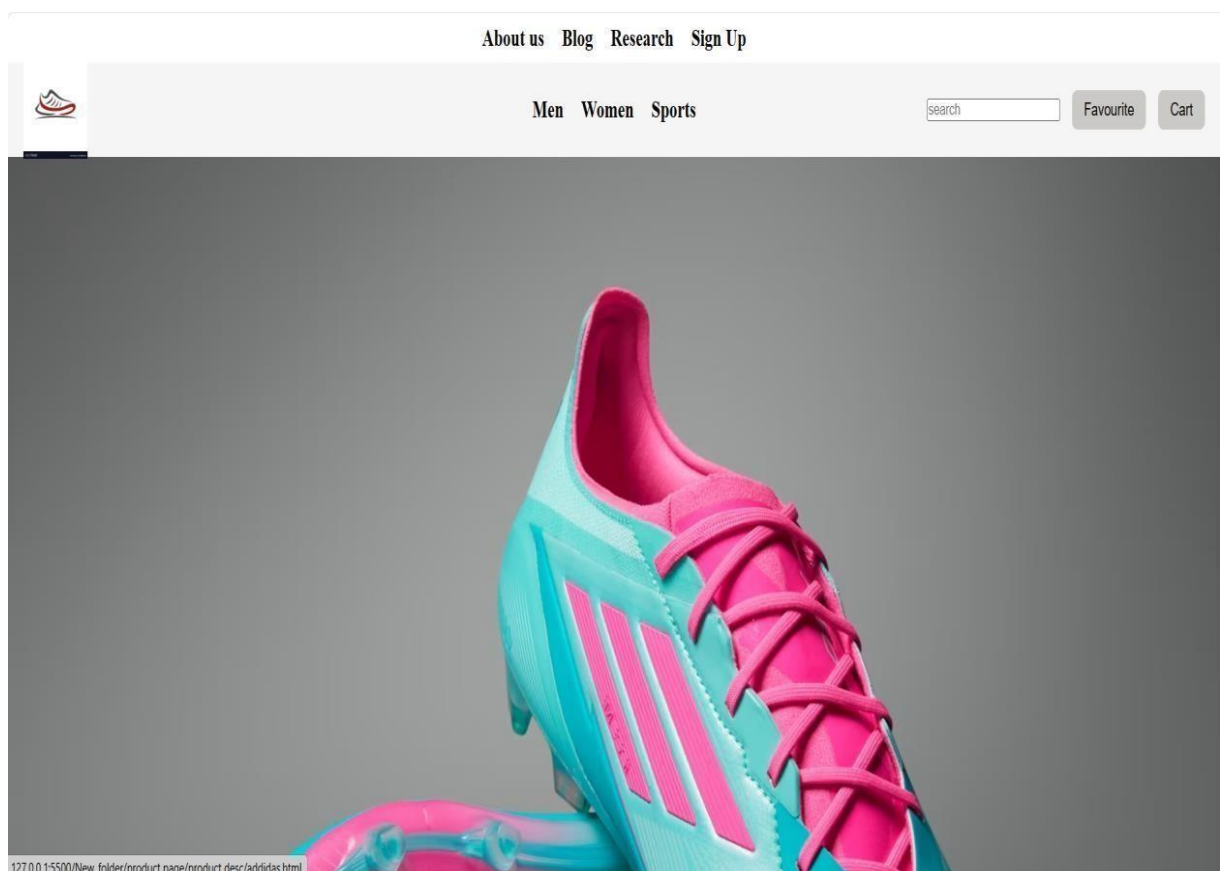

iv. Testing the image slider:

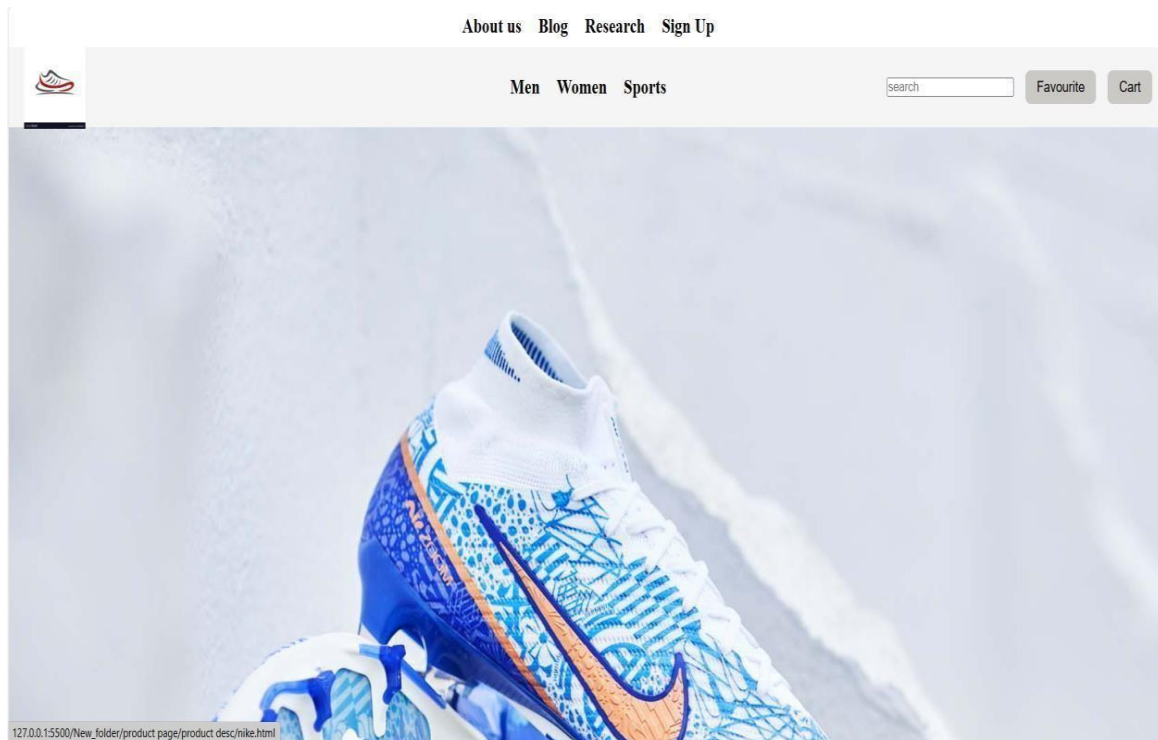

Objective	To check whether the image in the homepage changes in every 2.7 seconds or not
Action	Go to home page

	• Wait for 2.7 seconds • Observe the changes
Expected result	• After waiting for 2.7 seconds the image on the home page will change to another image by sliding
Actual result	• After every 2.7 seconds, the image in the homepage changed to another image by sliding
Test status	• The test was successful

Before:

After:

v. Testing the rating options:

Objective	To check whether the user can give rating out of 5 or not
Action	- Go to Men web page - Select one item from the product list - Click on the stars you want to rate
Expected result	on clicking the desired star, the rating will be set
Actual result	When we click on 4 stars, the stars were set to 4
Test status	The test was successful

5. Conclusion

In the conclusion section, we conclude the coursework process, which includes what we used, learned, the problems we faced, solutions to those and our opinions to make the project better.

vi. What we used?

We used various kinds of tools, platforms, resources, and materials for this project and some of the major things used are:

- Vs-code text editor
- Chrome, edge, and Brave browsers
- HTML, CSS, and JavaScript
- Teaching materials from lecture, tutorial, and workshop sessions
- YouTube videos and teachings

vii. What have we learned?

The entire process has taught us many things in designing and development of the website and some of the major things that we learned are as follows:

- We have learned to use and execute different tools, platforms, and languages like Vs-code, Balsamiq, Html, CSS, and JavaScript.
- We are now more skilled in researching and finding the information and evaluating it for a better approach.
- Working in a team, we now have better teamwork skills, and the deadline of the coursework has taught us to manage time.
- We learned to make reports of certain tasks and document them along with the presentation process.
- We have learned to tackle real world problems that arise in website development.
- In total, we learned to code, run the code in browser, give them a website format, test them, and make their wireframes for the easiness to understand.

viii. Problems faced

The entire process was somehow tricky but below are some problems that really made the tasks difficult:

- Getting the exact codes was difficult, which led us to perform many hits and trials methods and resulted in wasting our limited time.
- We also faced a few problems in managing and linking the codes done by each other because of the variety in styles, format, and designs of the code.

ix. Solution to the problems

Though we got some trouble but in no time, we figured out the solutions and below are the points on how we solve them:

- To get the exact codes we needed we checked the teaching materials and tags and code list and used them accordingly.
- For the task management we took the help and suggestions of the teachers which came out as the best idea for its solution.
- To solve the file and code linking problems we worked on it together after college by asking them about the code structure within the group members.
- There were many other problems also and we found that group discussion is the best solution for the maximum of the problems.

x. Our opinion for better output

This coursework has provided the opportunity to experience the website's development cycle. It taught us every step and effort required to make a website and below are some tips that we want to share according to our experience:

- Always explore the tools, resources, and platforms to become familiar with them and produce a better outcome.
- Proper task management among the group members is the most important thing.
- After every step consult the experts if possible or crosscheck the work among the members.
- Be creative as much as you can and never hesitate to ask or learn new things
 - Do proper research, learn from them, and try to do it in a unique and better way and have a vision, work on it, test it and finalize it after the approval of every member of your group.

6. All the codes used

<h2>Design Inspiration</h2>
```

```
<p>
```

Our team has gone through different modern e-commerce designs to traditional layouts to gain some knowledge and inspiration. We have used a simple theme with bold buttons for calls to action.
